

CASE STUDY

Bispebjerg and Frederiksberg Hospital uses Quadient's Web Tracking System (WTS) for visibility into delivery activity

Challenge

Bispebjerg and Frederiksberg Hospital, one of four emergency hospitals in the Capital Region of Denmark, employs 4,200 staffers, who serve over 460,000 citizens. It is currently expanding by adding 85,000 new square meters and converting 12,000 square meters into "New Hospital Bispebjerg". With a vast and growing area to cover, the central logistics team needed an innovative solution to track the internal delivery of an average of 1,200 parcels per month.

Solution

The Bispebjerg and Frederiksberg Hospital logistics team turned to Quadient Web Tracking System (WTS) for end-to-end visibility into their receipt and delivery activity. With WTS, the team has a complete view of their internal delivery process of parcels and is able to locate a package and track the movement history from the carrier to the recipient.

Results

With WTS equipment and processes, Bispebjerg and Frederiksberg Hospital can now establish proof of delivery at the time of receipt (which removes disputes with the carriers); locate parcels much more quickly and easily; and save time in reporting thanks to the WTS dashboard that provides statistics on deliveries.

Visibility into movement of parcels

With an already vast and still growing area to cover, the central logistics team needed an innovative solution to track the internal delivery of parcels. Bispebjerg and Frederiksberg Hospital receives all deliveries at a central location – the Logistics Management Facility. The logistics team, comprised of 15 staff members, then distributes the parcels to 80 locations over a large expanse.

The challenge that the team faced was being able to properly track and trace the 1,200 (and increasing number of) parcels they receive on average each month. Items received include internal parcels from other facilities within the Hospital, IT equipment, cooling packages, and other parcels of high value and importance.

About Bispebjerg and Frederiksberg Hospital

Bispebjerg And Frederiksberg Hospital is one of four emergency hospitals in the capital region of Denmark. Along with a number of other hospitals and the University of Copenhagen, Bispebjerg and Frederiksberg Hospital forms part of the Copenhagen University Hospital. The hospital employs 4,200 staffers, who serve over 460,000 citizens. It is currently developing into "New Hospital Bispebjerg" by adding 85,000 new square meters and renovating many of the existing buildings for new functions.

Easy-to-use platform

“We found Quadient WTS through an online search and learned that another hospital in Denmark uses WTS, so we went there to see the WTS solution in action,” said Louw Møller. Once the Hospital decided to utilise WTS, Quadient installed the cloud-based solution in two days and then the Hospital logistics team set up the rest of the system within three weeks, which included implementing delivery points, registering locations and departments in WTS, and training the staff on the application.

With the new WTS equipment and processes – including handheld devices, label printers, scanning handles, and multiple scanning steps of delivery locations barcodes – the logistics team is able to find missing parcels more quickly and easily, have better documentation and statistics pertaining to their deliveries, as well as gain time savings in reporting. “The platform is really easy to use, with an intuitive dashboard for parcel tracking and clear overview of the number of deliveries for any period of time, whether daily, weekly, monthly, or yearly,” said Jacobsen.

A happy customer

“Quadient has been a most trusted advisor for us in the implementation of WTS within the Hospital. They really listened to our needs and helped us solve the issues that we had,” said Jacobsen.

“Quadient has a well-developed product and is delivering top-notch customer service. We hope to work with Quadient in other aspects, and are exploring their parcel lockers solution, as well as potentially expanding into the tracking of medicine and other important samples,” concluded Louw Møller.

About Quadient®

Quadient is the driving force behind the world's most meaningful customer experiences.

By focusing on four key solution areas including Customer Experience Management, Business Process Automation, Mail-Related Solutions, and Parcel Locker Solutions, Quadient helps simplify the connection between people and what matters. Quadient supports hundreds of thousands of customers worldwide in their quest to create relevant, personalized connections and achieve customer experience excellence. Quadient is listed in compartment B of Euronext Paris (QDT) and is part of the CAC® Mid & Small index.
